

Safety Indicator

Safety Solutions

BONITRON

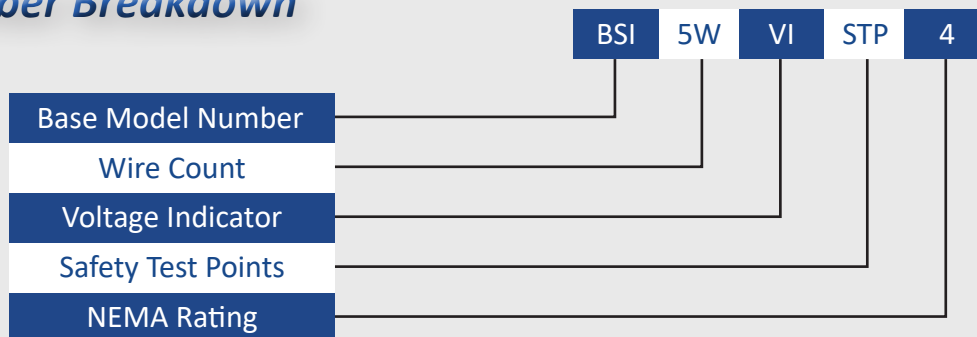

The Bonitron BSI Safety indicator is a 5-wire safety indicator and test station. It gives the user a visual representation of presence or absence of voltage and the ability to test for voltage with a built in test station. The enclosure is NEMA-4 rated, so the product can be mounted either indoors or outdoors.

Test Point Features

- Permanent Electrical Safety Device (PESD) that allows workers a safer way to verify presence or absence of voltage from outside the electrical cabinet.
- Contains five test point jacks that are hardwired directly to energy sources and allows measurement of both AC and DC voltages by inserting the insulated meter probes into any two test point jacks to take a voltage reading.
